## Executive summary

The Baltic and North Sea Coordination and Support Action (BANOS CSA) is preparing a framework for the joint Baltic Sea and North Sea Research and Innovation Programme (BANOS) by the end of spring 2021. A stakeholder analysis will allow the BANOS CSA consortium to understand who its stakeholders are and what the nature of the stakeholders' relationship is to the future BANOS programme. The goal of task 3.2 '*Forming a comprehensive analytic map of the future BANOS programme's stakeholders*' is to explore and map the stakeholder landscape and gauge the strength of the stakeholders' potential relationship to BANOS.

A typical stakeholder analysis process consists of four consecutive steps. First, the shared goal is determined (cf. D1.1 '*Scope of the future programme*'). In a second and third step, the stakeholders are identified and their relationships are analysed (D3.2 '*Map of stakeholders*', this report). For the final step, an engagement plan is formulated (cf. D3.5 '*Communications strategy*').

A **bottom-up desktop study** was carried out based on the intelligence gathering in the ongoing BONUS Art. 185 communication strategy for the Baltic Sea, while expanding the coverage to the North Sea area. A typology was developed for the classification (R&I, industry, policy...) and mapping of stakeholders and stakeholder groups. Stakeholders were identified through targeted web searches and queries in marine databases. In addition, a bibliometric search was conducted to detect complementary expertise and stakeholders that may not be obtained through web searches. To map the stakeholders' relationship towards the future BANOS programme, the stakeholders were scored on the degree of power and claim for urgency they might exert over the programme, as perceived by the consortium. Based on these attributes, stakeholders were assigned to four quadrants, each potentially requiring a different engagement strategy. Although this scoring was completed for all transnational stakeholders, further consultation of experts will be required to complete this approach for the national-level stakeholders, if such a degree of completeness is deemed necessary. These approaches were revised and complemented during an **interactive top-down exercise** that took place at the third meeting of the Forum of Programme Managers in June 2019, resulting in a completed and agreed list of stakeholders, ranked according to the impact they can have on the implementation of the future programme. A **final review** of the updated list and ranking of stakeholder groups was carried out by the Steering Committee by November 2019.

This mapping exercise has identified a list of 848 stakeholders, classified according to typology and geographic scope. Priority key stakeholder groups were mapped that can be strategically targeted in the future programme towards research and innovation actions, knowledge transfer and uptake, and inform other programmatic and communication and engagement plans. Hence, task 3.2 provides the necessary input for task 3.4 '*Forming the future BANOS programme's stakeholder platforms*' and task 3.5 '*Adapting the communications and engagement strategy to fit the future BANOS programme*'.

However, the current stakeholder map is not intended as an ultimate resource. The shared goal of the BANOS programme may change over time, and more specific goals will emerge through further refinement of the programme's scope and sculpting of the SRIA. Therefore, new stakeholders may be added as appropriate and the relation of a specific stakeholder or group of stakeholders towards the programme may vary over time depending on the different stages and objectives of the programme's activities.

## Introduction

The Baltic and North Sea Coordination and Support Action (BANOS CSA) is preparing a framework for the joint Baltic Sea and North Sea Research and Innovation Programme (BANOS) by the end of spring 2021. Effective communications and stakeholder engagement are viewed in BANOS CSA as key elements for successfully delivering the future BANOS programme, and will therefore be enacted through several tasks as part of BANOS CSA WP3 ‘*Communications, dissemination and stakeholder engagement*’. A stakeholder analysis will allow the BANOS CSA consortium to understand who its stakeholders are and what the nature of the stakeholders’ relationship is to the future BANOS programme, since stakeholders are not equally involved in or impacted by the programme. Task 3.2 ‘*Forming a comprehensive analytic map of the future BANOS programme’s stakeholders*’ is designed to address this necessary first step in stakeholder engagement. The specific goal of this task is to explore and map the stakeholder landscape and gauge the strength of the stakeholders’ linkages to the future programme. This report, deliverable 3.2, presents the final results of the activities carried out to accomplish the task 3.2.

A typical **stakeholder analysis process** consists of four consecutive steps (Figure 1).

Figure 1. The different steps of a stakeholder analysis process. Task 3.2 of the BANOS CSA project focuses on step 2 and 3 in this process.

In a first step, the shared goal is identified. For BANOS, this is defined by the scope of the future programme: what it is trying to achieve with its services, what research and innovation domains will be developed in the BANOS Strategic Research and Innovation Agenda (SRIA), what specific measures will reinforce the future programme’s lasting impact etc. A clear definition of the outcome or output envisaged by the future programme is needed to find the common goal for the stakeholders. Since completion of the SRIA is not planned within the timeframe of task 3.2, the results of task 1.1 ‘*Scoping the strategic framework for the future programme*’ are put forward as the shared goal. Three strategic objectives make up the scope of the future programme, each underpinned by multiple specific objectives.

- **HEALTHY SEAS AND COASTS**, with the aim to increase the ecosystem resistance and resilience by better understanding the natural processes and how they are affected by human activities.
- **SUSTAINABLE BLUE ECONOMY**, with the aim to optimise the use of marine resources while minimizing the negative impact through understanding the cumulative effects of human activities on marine ecosystem functioning.
- **HUMAN WELLBEING**, with the aim of establishing an ecosystem-based marine governance, including early engagement of all appropriate stakeholders.

According to the scoping exercise, these three strategic objectives are critical for delivering on European marine and maritime strategies and policies (e.g. Blue Growth Strategy, MSFD etc.) in the North Sea and Baltic Sea regions. However, the outcome of task 1.1 is not definitive, and no clear boundaries have been set at this point in the process. The specific objectives as well as the themes of research and innovation to be addressed by the future programme will be further defined and adjusted

to new insights during stakeholder and expert consultations to further develop the SRIA. Elements that will be taken into account are new developments in research policy (e.g. Horizon Europe Clusters and partnerships<sup>1</sup>), political trends in macroregions and macroregional strategies, and new insights from the BANOS CSA tasks. Therefore, mapping has been carried out in a broad, inclusive manner, adhering to the general goal of the future programme ‘to enhance joint research and innovation efforts in the Baltic Sea and North Sea Region’. The shared goal can be further specified once the tasks within WP 1 ‘*Strategic research and innovation agenda (SRIA)*’ and WP 2 ‘*Implementation modalities*’ will get shape.

The present task addresses the second and third step of the stakeholder analysis process (Figure 1). The second step, identification of stakeholders, can yield a comprehensive list of all institutes that will be actively involved in the future programme, or whose interests may be affected as a result of the execution of the programme. A classification of individual stakeholders in stakeholder groups is likely to support a comprehensive exercise. It can provide information on the typology of individual stakeholders (research, industry, policy etc.), improve the accessibility of the database for queries, and serve as a guideline to ensure proper representation of all stakeholder groups.

The key aim of the third step is to understand the nature of the relationships between the SRIA/future programme and each stakeholder, with the purpose to prioritise the engagement plan accordingly. A number of commonly used tools for assessment of stakeholder relationships are available (e.g. Mitchell et al. 1997; Cameron et al. 2011; Savage et al. 2011). A slightly modified version of the method developed by Mitchell et al. (1997) was previously adopted in the ongoing BONUS Art. 185 programme (i.e. a programme and its legacy that are used as the basis when building the successor programme BANOS). This widely used method was originally developed in a business context but has broader relevance. Developed to assess a stakeholder’s salience to the organisation/programme based on consideration of the attributes *legitimacy*, *power* and *urgency* (Cf. *Methodology*), the method is used here to quantify the strength of the stakeholders’ linkages to the future BANOS programme.

The final step of the stakeholder analysis process builds on the information developed during previous steps. It promotes coordination and communication activities by setting out how the stakeholders can be involved in the future programme. It takes into account the nature of the relationships between the programme and the different stakeholders. Hence, task 3.2 will provide the necessary input for task 3.3 ‘*Mapping and analysis of related transnational initiatives and co-operation potentials in the North Sea and the Baltic Sea*’, task 3.4 ‘*Forming the future BANOS (i.e. BANOS) programme’s stakeholder platforms*’ and task 3.5 ‘*Adapting the communications and engagement strategy to fit the future BANOS (i.e. BANOS) programme*’.

## Methodology

The stakeholder mapping exercise of task 3.2 is carried out in two consecutive phases: first, a bottom-up desktop study which covers the identification of stakeholders, including a bibliometric search, and mapping of their relationship to the future programme, and second, a top-down review exercise to gather input from the BANOS CSA’s Forum of Programme Managers (FPM) and the Steering Committee (SC).

## Bottom-up desktop study

### Stakeholder identification

A desktop study has been carried out to identify the stakeholders and stakeholder groups based on the intelligence gathering in the ongoing BONUS Art. 185 communication strategy for the Baltic Sea, while expanding the coverage to the North Sea area. An existing list prepared by the BONUS EEIG for the BONUS Art. 185 Programme was used for the Baltic Sea region. Targeted internet searches and queries in marine databases were the primary means to identify the stakeholder groups and individual stakeholders in the North Sea region. Strategic websites summarising e.g. responsible authorities for specific science-policy topics were consulted. Stakeholders were only considered if they were perceived to be in a position to influence progress towards the shared goal or as being themselves impacted by this progress. A complete list of consulted sources is included in Annex A. A few examples of resources used are:

- Members and partners of [JPI Oceans](#), the [European Marine Board](#), [OSPAR](#), [ICES](#), the [European MSP Platform](#).
- [IOC - Global Ocean Science Report 2017 and the survey responses to the GOSR-II \(2019\)](#)
- [DG MARE - Workshop Strategic Cooperation on Blue Growth in the North Sea 2016](#)
- A list of funding agencies was prepared by ANR for T2.2 of the BANOS CSA and integrated in this stakeholder identification exercise.

An initial classification of stakeholder groups with reference to different geographic scales (national, macroregional, European and global) and typologies (funding bodies, policy, industry, research and innovation community etc.) was drafted based on the previous experiences of some European marine initiatives (EMAR2RES 2011; JPI Oceans 2013; BONUS EEIG 2015). This draft version was extensively refined and adjusted during the mapping process. The final classification (cf. *Results*) was ratified by the BANOS CSA FPM and SC during the FPM3/SC2 meetings in Copenhagen on 6 June 2019, and subsequently used to allocate each individual stakeholder to its most appropriate category. During the desktop study, additional stakeholder-specific information was captured, such as the individual stakeholder's website and publicly available contact information.

The key importance of media and knowledge brokers as a whole to the future BANOS programme should be acknowledged, with regard to the visibility and potential impact this programme aims to generate. Considering the very unique operational dynamics of this stakeholder group, it was decided that it would be more efficient to define and identify the stakeholders of this group at a later time when the framing of the programme is more advanced, i.e. being launched. Hence the media sector is not included in the current study. For example, building on the BONUS Art. 185 legacy and its (limited) communication resources, media departments of the BONUS members and their respective media networks are amongst key channels enabling engagement with different media on programme level. Equally, BONUS-funded projects are encouraged at the project level to make the best use of their respective institution's media departments and in turn their respective networks. This is an efficient way of operation in the fast-changing and evolving media landscape in which keeping up current and up-to-date networks is dependent on very labour intensive efforts. This pragmatic approach will benefit the future BANOS programme.

### Bibliometric analysis

The aforementioned 'stakeholder identification' provides an efficient methodology to identify stakeholders that are specifically involved in the marine or maritime research and innovation field. However, there are also large research institutions (e.g. universities) that do not specifically have a marine focus but may still be very active in this field of research. In order to also capture these institutions as stakeholders, a bibliometric study was conducted to complement the results of the stakeholder identification exercise. The bibliometric study was executed in Scopus ([www.scopus.com](http://www.scopus.com)),

Elsevier), an international abstract and citation database of peer-reviewed literature. All data was retrieved on April 18, 2019.

In a first step, a list with marine and maritime keywords (Annex B) was compiled and extensively refined. This list was used to query the title, abstract and keywords of the peer-reviewed literature included in Scopus (1861-2019) for each of the North and Baltic Sea countries<sup>2</sup>. Great care had to be taken to enable the selected keywords to generate meaningful results. Hence, only keywords with a predominantly marine or maritime meaning were withheld. Terms like ‘vessel’ or ‘port’ were removed from the list. In order to fine-tune the list of keywords, the results for the case of Belgium were compared with the results of a detailed marine bibliometric study that is conducted annually by the Flanders Marine Institute (VLIZ) (Pirlet et al. 2018). Based on this comparison, the keywords were further refined, although a slight overestimation is still included in the results as some terms such as ‘marine’ are also used in other context, e.g. ‘marine geological outcrops on land’.

It should be duly noted that the applied methodology has a number of limitations. On the one hand, the results of the current bibliometric study are not exhaustive and contain a limited number of false positives (cf. supra). On the other hand, it is clear that not all research activities result in A1 papers which are included in SCOPUS. National-level publications, project reports, policy advice, grey literature, etc. were not taken into account in this bibliometric study. Moreover, certain research fields have specific literature databases (e.g. Inspec) which were not queried for the purpose at hand. Given these considerations, the current bibliometric study should be regarded as an initial horizon scanning which allows to identify the major marine research stakeholders of the countries involved in BANOS. In addition, the results also offer insight in the expertise which is present in these countries and provide an initial picture of the existing marine and maritime research collaborations in the North Sea and Baltic Sea regions.

For each country, 15 institutes with the highest number of marine and maritime publication hits were compiled with the results of the first stakeholder identification exercise. The extent of transnational collaboration between any two countries was assessed using the amount of shared co-authorship as a proxy.

### Analysis of stakeholders’ relationship to the BANOS programme

For the purpose of mapping priority key stakeholders for the future programme, a method was used considering the attributes *legitimacy*, *power* and *urgency* (Mitchell et al. 1997), which were defined as follows:

- **Legitimacy:** “A generalised perception or assumption that the actions of an entity are desirable, proper, or appropriate within some socially constructed system of norms, values, beliefs, definitions.” The bases for legitimacy can be individual, organisational, and/or societal.
- **Power:** “A relationship among social actors in which one social actor, A, can get another social actor, B, to do something that B would not have otherwise done.” The bases for power can be ‘Coercive-force/threat’, ‘Utilitarian-material/incentives’ and/or ‘Normative-symbolic influences’.
- **Urgency:** “The degree to which stakeholder claims call for immediate attention.”

In alignment with the earlier BONUS Art. 185 approach, stakeholders were mapped according to how they score on each attribute. In the context of the future programme, all stakeholders included in the results of the desktop study were considered to have strong legitimacy. Therefore, no individual scores were applied for this attribute. For both the *power* and *urgency* attribute, a scale of 1 to 5 (1 = least, 5

---

<sup>2</sup> 14 countries (BE, DK, EE, FR, DE, LV, LT, NL, NO, PL, SE, and UK as BANOS CSA member countries, FI as an observer, and RU)

= most) was used to map stakeholders according to how they are rated on these attributes (Figure 2). The output of the analysis is a ranking of every stakeholder based on a *power-urgency* relationship, indicating the degree to which the stakeholders may impact the implementation of the future programme or may be impacted themselves by the programme. The stakeholders allocated to the top quadrant (high power and high urgency) will be particularly useful for engagement towards the implementation of the BANOS programme.

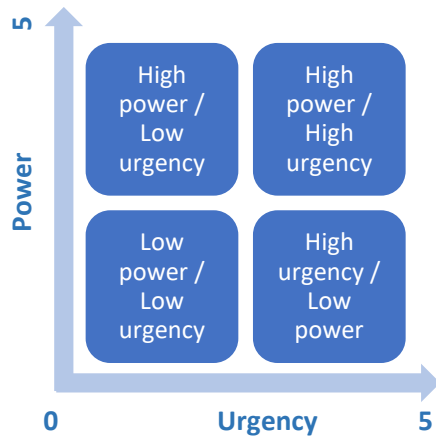

Figure 2. Framework for the analysis of stakeholders' relationships to the future programme. The positioning of stakeholders along the power-urgency axes represents their respective importance for strategic targeting in the engagement plan.

## Top-down review exercise

An interactive top-down review exercise took place at the BANOS CSA FPM in June 2019, to achieve a stakeholder list and ranking that is supported by all the members of the BANOS CSA consortium. This exercise provided the BANOS CSA programme managers and members of the SC with an opportunity to review, correct and add to the existing stakeholder lists. Participants were also invited to advise on the *power-urgency* rankings, according to the impact each stakeholder can have on the implementation of the future programme, and to comment on the draft classification of stakeholder typologies.

Before the interactive review exercise on June 6 took place, a set of instructions was distributed among the programme managers and members of the SC, including a preliminary list of stakeholders and a draft classification ('*Setting the scene for the tasks to be carried out on 6 June 2019 by the BANOS CSA Steering Committee*'). During the exercise, large-sized *power-urgency* charts were posted on the walls of the venue. Participants could displace or add missing macroregional, European and global stakeholders to these charts with post-it notes, allowing intuitive *power-urgency* scoring and simultaneous correction of missing or surplus stakeholders. Lists of national stakeholders were handed to national representatives for the same purpose. Participants were also given the chance to submit an electronic revision, especially from the perspective of their national expertise, by June 28, 2019. These revisions were collected by the task leader (Flanders Marine Institute – VLIZ) and integrated into a final draft that was approved at the fourth FPM taking place on 6 November 2019.

## Results

### Identification of stakeholders and stakeholder groups

The final classification of stakeholders (Table 1) consists of four different stakeholder types, further partitioned in 20 different stakeholder groups. Besides this classification and for ease of recognition, some stakeholders are additionally assigned to one or more of three complementary groups: 1. BONUS members, 2. BANOS CSA members and strategic partners, and 3. research institutes that are identified through the bibliometric study.

Table 1. Classification of stakeholders according to types and groups

Type	Group	Examples
<b>Research and innovation community</b>	Research performing institute	IFREMER, GEOMAR, NIOZ, VLIZ
	University	University of Copenhagen, the Polish Naval Academy, the Sven Lovén Centre for Marine Infrastructure
	Research infrastructure network	ESFRIs, GOOS, Copernicus
	Research and innovation network	EUROMARINE, EFARO, SCOR, EMB
	Academic association	KDM, EMSEA, ABS
<b>Industry</b>	Company	SSPA, SJE, Technopolis Group
	Company (innovation) clusters	Blauwe Cluster, Maritime UK, the Danish Energy Innovation Cluster, Maritime by Holland
	Technology platform	Waterborne TP, European Technology and Innovation Platform on Wind Energy
	Trade association	ECSA, EuDA, OEE
<b>(Governmental) policy</b>	Funding agency	BELSPO, IFD, RVO, Innovate UK
	EU funding programme	Interreg Baltic Sea region programme
	Science, technology and innovation ministries and administration	EWI, BMBF
	(Marine and maritime) ministries and administration	BMEL, RWS
	Intergovernmental bodies	OSPAR, HELCOM, JPI Oceans, OECD
	Advisory body	ISC, ICES
	Other public authority	Ports, city councils
	United Nations	IOC, UNEP
	EU institutions and services	EMSA, EFCA, DG MARE
<b>Civil society</b>	Private funding body and thrust fund	Rockefeller Foundation, BalticSea2020
	NGO	WWF, SAR, GFF
<b>Complementary groups</b>	Institutes in bibliometric top 15	Indicated in lists with *
	BANOS CSA members and strategic partners	Indicated in lists with **
	BONUS members	Indicated in lists with ***

A total number of 848 stakeholders were identified, including those resulting from the bibliometric study (Annexes C-F). A draft version of that list, containing 772 stakeholders, was subjected to a review phase with input from the FPM, at which point 24 stakeholders were discarded and 100 stakeholders were added. Figures 3-5 provide a breakdown of the 848 stakeholders by type, group and geographical scale, respectively. Stakeholders from the research and innovation community are represented best, mainly through universities and other research performing institutes. The policy field is represented mostly through national ministries and their administrations, and funding agencies. Companies, company innovation clusters and trade associations in equal parts make up the industrial share of stakeholders. Most stakeholders' activities are predominantly conducted within national borders. About 13% of identified stakeholders operate on a European-wide scale. Another 9% act on a global interest, and 4% of stakeholders focus on a particular macroregion, which most often translates to the North Sea and/or Baltic Sea basins.

Figure 3. Number of identified stakeholders, divided by type.

Figure 4. Number of identified stakeholders, divided by group.

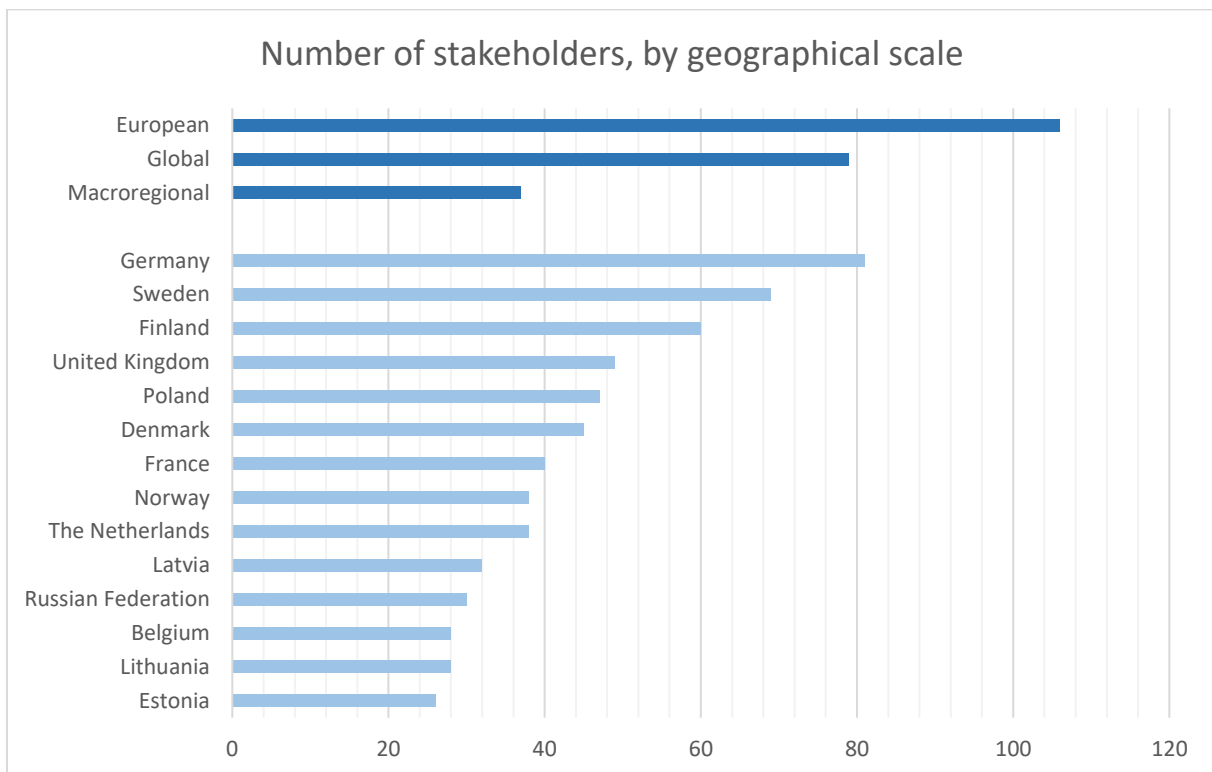

Figure 5. Number of identified stakeholders, divided by geographical scale.

## Results of bibliometric analysis

The Scopus query, conducted in April 2019, yielded a total of 428,079 publications for the 14 countries evaluated in this study (Figure 6). The number of publications retrieved per country ranges from 715 to 140,366. Our query identified the United Kingdom as the most active contributor to marine and maritime research (140,366 publications), followed by Germany (85,097 publications) and France (80,958 publications). Collaboration is most extensive between the United Kingdom, Germany and France, with 9,410 shared publications between the UK and Germany, 8,439 between the UK and France, and 6,174 between Germany and France. The subject areas of the publications, as determined by Scopus, are shown in Figure 7. Altogether, 942 affiliations were listed for the recovered set of publications. Of these affiliations, 210 were added to the stakeholder list –insofar as they weren't already included– corresponding to the 15 institutes with the highest publication output for each of the 14 countries. The stakeholders identified through this bibliometric study consist of universities (125) and other research performing institutes (78), along with a few large companies such as Maersk and Equinor.

Figure 6. Based on the results of the bibliometric study, an overview of marine A1 scientific publications (included in SCOPUS) and transnational collaboration (in terms of co-authorship) for the BANOS CSA member countries is provided<sup>3</sup>. Circles are geographically centred for each country bordering the North and Baltic Seas, and sized according to their publication output related to marine and maritime topics. Connections between circles are sized in proportion to the amount of shared authorship between countries.

<sup>3</sup> More information on the bibliometric study and the limitations of the applied approach is given in the *Methodology* section.

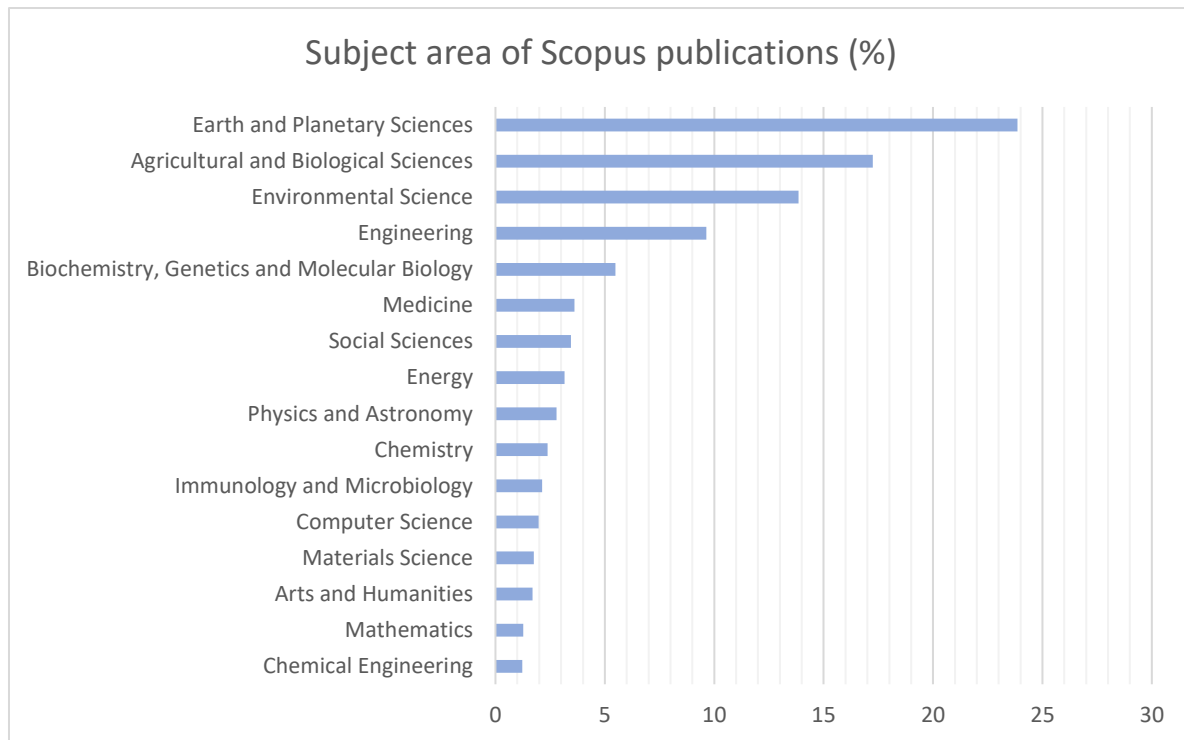

Figure 7. Subject areas of the marine- and maritime-related publications, displayed in percentages. Assignment of publications to subject areas was done by Scopus. Fractions smaller than 1% are not shown.

## Stakeholders' relationship to the BANOS programme

All 222 transnational stakeholders (i.e. macroregional, European and global) have been scored for their *power* and *urgency* attributes as perceived by the BANOS CSA consortium. Projected onto a *power-urgency* chart (Figure 8), the largest share of stakeholders (78) are situated in the bottom quadrant (low urgency / low power). The top quadrant, considered as having both high *power* and high *urgency*, contains 69 stakeholders. Another 45 and 30 stakeholders were assigned to the high *urgency* and high *power* quadrants, respectively. See Annex G for a detailed breakdown of transnational stakeholders per quadrant. Figure 9 displays a selected number of transnational stakeholders on a *power-urgency* chart as examples, to provide comparative context when considering any single stakeholder. For the national-level stakeholders, 25% were scored (158 out of 626). The results for the national-level assessment will not be further detailed in this report (see *Discussion*).

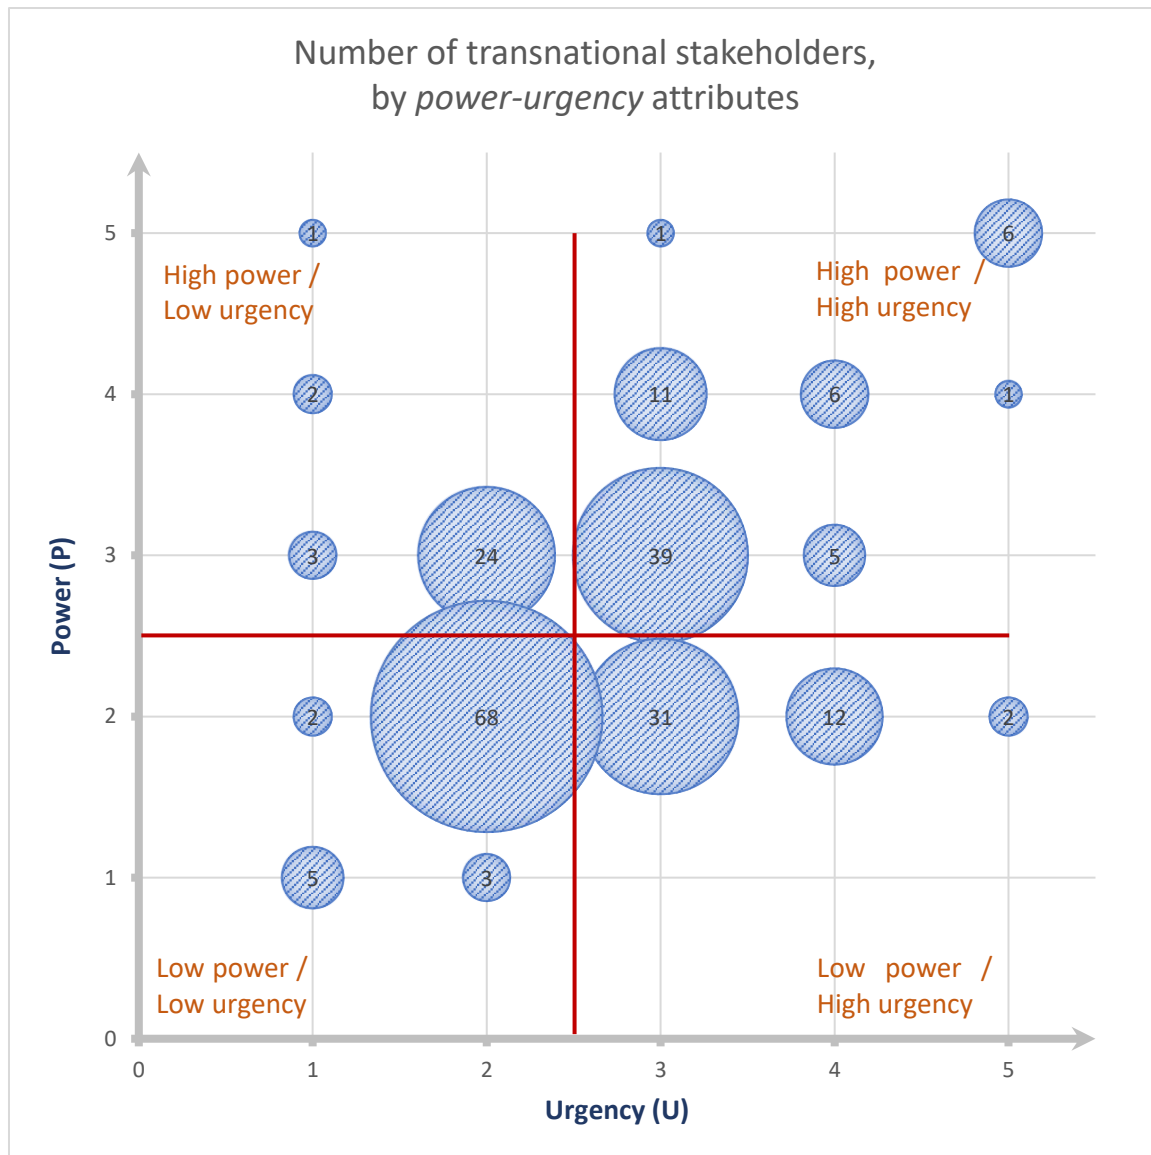

Figure 8. Number of transnational stakeholders (i.e. with a macroregional, European or global scope), grouped by power and urgency towards the BANOS programme as perceived by the BANOS CSA consortium. Circle areas are proportional to the number of stakeholders that received a power and urgency score corresponding to the respective coordinates on the chart. The red lines divide the chart in four quadrants: a top quadrant ( $P \geq 3$ ,  $U \geq 3$ ), a high power quadrant ( $P \geq 3$ ,  $U < 3$ ), a high urgency quadrant ( $P < 3$ ,  $U \geq 3$ ), and a bottom quadrant ( $P < 3$ ,  $U < 3$ ). Each quadrant potentially warrants a tailored engagement strategy (see Discussion). For a complete list of the power-urgency scores attributed to the transnational stakeholders, see Annex G.

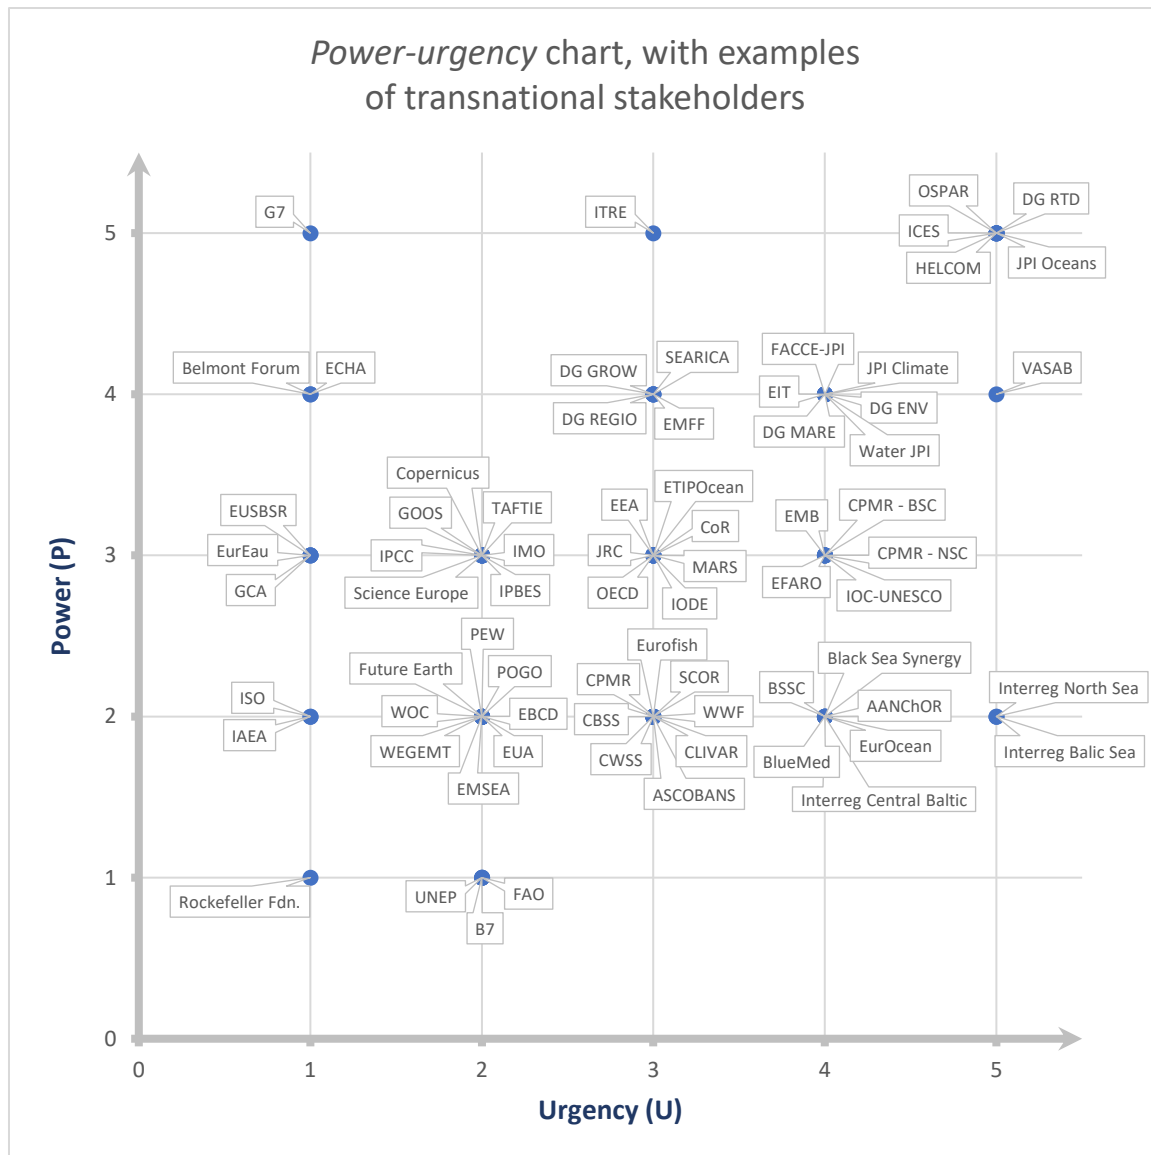

Figure 9. Power-urgency chart, displaying a selection of transnational stakeholders (i.e. with a macroregional, European or global scope). Stakeholders are positioned along the axes based on their power and urgency towards the BANOS programme, as perceived by the BANOS CSA consortium. The stakeholders displayed on this chart are limited to an arbitrary subset of the 222 transnational stakeholders identified in this report (Annexes C-E). This figure is meant to provide example results of the analysis of stakeholder's relationships to the BANOS programme, as well as to provide context when considering the power and urgency attributes of any given stakeholder. For a complete list of the power-urgency scores attributed to the transnational stakeholders, see Annex G.

## Discussion

The shared goal of the BANOS programme may change over time, and more specific goals will emerge through further refinement of the programme's scope and sculpting of the SRIA. Therefore, the development of a stakeholder map for BANOS is intended to stretch beyond the duration of this task. The stakeholder map that is presented within the current deliverable should be treated as a living document, to be updated at regular intervals. Stakeholders may be added as appropriate and the scoring of the *power* and *urgency* attributes for a specific stakeholder or group of stakeholders may vary over time depending on the different stages and objectives of the programme. As a result, appropriate stakeholder interactions formulated in an engagement plan can also change over time.

*Power* and *urgency* scoring has been carried out for all transnational stakeholders (i.e. macroregional, European and global, see Annex G), enabling a comprehensive stakeholder analysis for these groups and subsequent selection of stakeholders with the highest priority for early engagement. We did not envision the same level of completeness for the assignment of scores to national stakeholders. Such an exercise requires extensive participation of national experts, perhaps yielding too limited practical value at this stage of the programme. Therefore, contribution from the FPM to national-level scoring was asked and encouraged but most attention was directed towards transnational scoring rather than national scoring. As such, one in four national stakeholders have been scored with contribution and validation of consortium members. Any missing national scores can be supplemented in future stages of the programme, if required for specific engagement needs.

The *power-urgency* chart adopted in this study offers a simple yet elegant approach to stakeholder management. The chart is divided in quadrants that each require different engagement strategies (Figure 10). Mitchell et al. (1997) propose an active engagement attitude towards the stakeholders in the top quadrant, whereas those in the bottom quadrant would only require passive reaction. While this is true in general, all BANOS stakeholders in the bottom quadrant can be considered as deserving potential engagement depending on the needs that arise with specific goals during the programme. Stakeholders in the 'High power / Low urgency' quadrant are typically a group that needs to be kept satisfied, whereas those in the 'High urgency / Low power' quadrant need to be kept informed. With this framework, the list of stakeholders composed in this task and their respective *power* and *urgency* attributes can serve as a starting point for BANOS CSA task 3.5, the development of an engagement plan for the BANOS programme.

Figure 10. Each quadrant of the power-urgency chart requires a different engagement strategy.

The results of this study also support progress of task 3.3. The aim of task 3.3 '*Mapping and analysis of related transnational initiatives and co-operation potentials in the North Sea and the Baltic Sea*' is to assess the current policy context with regard to transnational scientific cooperation in Europe, and to arrive at a set of mechanisms for efficient cooperation with the most relevant stakeholders. To that

end, the *power-urgency* scoring can be used to identify the stakeholders of highest priority and engage with them early on to discuss possible cooperation mechanisms.

## Annex G: Power-urgency scores of transnational stakeholders, by quadrant

TRANSNATIONAL STAKEHOLDERS – HIGH POWER / HIGH URGENCY	ACRONYM	P	U	P+U
Convention for the Protection of the Marine Environment of the North-East Atlantic	OSPAR	5	5	5
Baltic Marine Environment Protection Commission - Helsinki Commission	HELCOM	5	5	5
Directorate-General for Research and Innovation	DG RTD	5	5	5
Baltic Organisations Network for Funding Science	BONUS EEIG	5	5	5
International Council for the Exploration of the Sea	ICES	5	5	5
Joint Programming Initiative Healthy and Productive Seas and Oceans	JPI Oceans	5	5	5
Vision and Strategies around the Baltic Sea	VASAB	4	5	4.5
European Parliament Committee on Industry, Research and Energy	ITRE	5	3	4
Directorate General for Maritime Affairs and Fisheries	DG MARE	4	4	4
Directorate-General Environment	DG ENV	4	4	4
European Institute of Innovation and Technology	EIT	4	4	4
Joint Programming Initiative Connecting Climate Knowledge for Europe	JPI Climate	4	4	4
Joint Programming Initiative Water Challenges for a Changing World	Water JPI	4	4	4
Joint Programming Initiative on Agriculture, Food Security and Climate Change	FACCE-JPI	4	4	4
Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs	DG GROW	4	3	3.5
Directorate-General for Regional and Urban Policy	DG REGIO	4	3	3.5
Seas, Rivers, Islands and Coastal Areas Intergroup	SEARICA	4	3	3.5
Directorate-General for Agriculture and Rural Development	DG AGRI	4	3	3.5
Directorate-General for Climate Action	DG CLIMA	4	3	3.5
Directorate-General for External Policies	DG EXPO	4	3	3.5
European Maritime and Fisheries Fund	EMFF	4	3	3.5
Intergroup on Climate Change, Biodiversity and Sustainable Development		4	3	3.5
EP Informal Baltic Sea Group		4	3	3.5
Competitiveness Council	COMPET	4	3	3.5
Council of the EU Working Party on Research		4	3	3.5
Intergovernmental Oceanographic Commission of UNESCO	IOC-UNESCO	3	4	3.5
Conference of Peripheral Maritime Regions - North Sea Commission	CPMR - NSC	3	4	3.5
European Marine Board	EMB	3	4	3.5
European Fisheries and Aquaculture Research Organisation	EFARO	3	4	3.5
Conference of Peripheral Maritime Regions - Baltic Sea Commission	CPMR - BSC	3	4	3.5
International Oceanographic Data and Information Exchange	IODE	3	3	3
Organisation for Economic Co-operation and Development	OECD	3	3	3
European Environment Agency	EEA	3	3	3
Joint Research Centre	JRC	3	3	3
European Maritime Safety Agency	EMSA	3	3	3
European Food Safety Authority	EFSA	3	3	3
European Fisheries Control Agency	EFCA	3	3	3
European Network of Marine Research Institutes and Stations	MARS	3	3	3
European Aquaculture Society	EAS	3	3	3
European Global Ocean Observing System	EuroGOOS	3	3	3
European Ocean Observing System	EOOS	3	3	3
European Research Vessel Operators	ERVO	3	3	3
European Marine Observation and Data Network	EMODnet	3	3	3
European Multidisciplinary Seafloor and Water Column Observatory	EMSO	3	3	3

European component of the international Argo global ocean observing system	Euro-Argo	3	3	3
European Marine Biological Research Centre	EMBRC-ERIC	3	3	3
LifeWatch-ERIC		3	3	3
Waterborne Technology Platform	WATERBORNE TP	3	3	3
European Aquaculture Technology and Innovation Platform	EATIP	3	3	3
European Technology and Innovation Platform on Wind Energy	ETIPWind	3	3	3
NetWorld2020 European Technology Platform	NetWorld2020 ETP	3	3	3
Farm Animal Breeding and Reproduction Technology Platform	FABRE TP	3	3	3
European Technology Platform on Sustainable Mineral Resources	ETP SMR	3	3	3
European Technology Platform for Advanced Engineering Materials and Technologies	EuMaT	3	3	3
European Technology and Innovation Platform Bioenergy	ETIP Bioenergy	3	3	3
European Committee of the Regions	CoR	3	3	3
European MSP Platform		3	3	3
Executive Agency for Small and Medium-sized Enterprises	EASME	3	3	3
European Commission Legal Service		3	3	3
NordForsk		3	3	3
Stockholm Environment Institute	SEI	3	3	3
European External Action Service	EEAS	3	3	3
Research Executive Agency	REA	3	3	3
European Centre for the Development of Vocational Training	Cedefop	3	3	3
European Regions Research and Innovation Network	ERRIN	3	3	3
BiodivERsA		3	3	3
Enterprise Europe Network		3	3	3
European Technology and Innovation Platform for Ocean Energy	ETIPOcean	3	3	3
Eurofleets	EuroFleets	3	3	3

<b>TRANSNATIONAL STAKEHOLDERS – HIGH POWER / LOW URGENCY</b>	<b>ACRONYM</b>	<b>P</b>	<b>U</b>	<b>P+U</b>
